World First - World Leader - World Class

You Can't See In Smoke...

Fire crews are professionals, highly trained and well equipped but...

In zero visibility they must...

- find the fire**
- find the casualties**
- find their way around**

What they don't have is time!

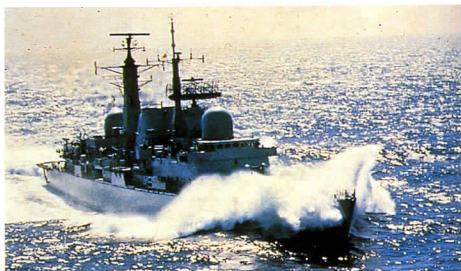

Fires can happen anywhere and at any time. At sea a ship or an oil platform is a self-contained community. Here the crew have to rely on themselves to fight the fire and to search for and rescue any casualties. They can't call the fire brigade who may be thousands of miles away.

On land, whether in hotels, office blocks, railway tunnels or industrial installations the fire-fighters must be fully equipped to effect rapid search and evacuation.

Whatever the scenario, smoke is one of the greatest handicaps facing fire-fighters in achieving their objectives, it causes zero visibility and will dramatically slow down both rescue operations and the search for the seat of the fire - SMOKE KILLS - TIME IS NOT AVAILABLE.

Only EEV can offer the world's best selling fire-fighters Thermal Imaging Cameras - and field proven performance.

EEV Thermal Imaging - The fire-fighters choice.

EEV

*clear through
Smoke Vision*

EEV developed and introduced the world's first fire fighting camera in association with the UK Ministry of Defence and the Central Fire Brigade Advisory Council for England, Wales and Scotland. The Thermal Imaging camera can restore the vision of the fire-fighter in dense smoke-logged conditions. It has revolutionised both the UK and US Navy procedures for fire-fighting, damage control and rescue on board ship. With over 6000 units in operational service and having been presented the Queen's award for technological achievement and export we are justifiably proud of our position as world leaders in providing Thermal Imaging for fire-fighters.

Whether you need to fight fires, search for casualties or evacuate personnel to safety, your fire crews *need* Thermal Imaging and, with over ten years experience in this field - where performance and reliability is critical, there is only one choice, EEV.

...we have the solution!

EEV Limited are a wholly owned subsidiary of the General Electric Company plc.

Our expertise in electronic imaging is second to none and with a product range of over 1000 devices, we serve the needs of telecommunications, military, scientific and medical industries worldwide.

EEV are World leaders in providing thermal imaging systems for the fire-fighter and our research and development teams work in close co-operation with regulatory bodies and users to ensure our products can satisfy the needs of the customer both now and in the future.
